

ODFL Project Summary

Latrines for Improving Children's Health and Environment Protection
Pucang, Bali, Indonesia

**Project Name:**

Pucang, Bali Latrines Project

Project Location:

Pucang, Ban Village, East Bali, Indonesia

NGO Partner:

East Bali Poverty Project (EBPP)

Project Cost:

\$8,704

Needs Assessment:

- There are no toilets in the Pucang hamlet.
- River water, used for drinking and cooking is contaminated with human fecal matter causing diarrhea, E.coli, and diphtheria. Sickness for all is recurring and inescapable.
- This will complete the 126th latrine in a four-year campaign to eradicate E.coli from Ban and environs.

In the remote Pucang hamlet in the area of Ban in East Bali, Indonesia, nearly 95% of the families do not have toilets, running water or electricity. Illiteracy is close to 100%. Since no one has toilets, they use the bushes or nearby fields. The land and water then become contaminated by fecal matter. Sickness and death results from diarrhea, diphtheria, and E.coli. The problem is especially acute for children under 5.

ODFL, in partnership with East Bali Poverty Project (EBPP), will build 34 pit latrines throughout the village that will be shared by 44 families. The goal is to insulate the water supply from human waste and reduce related sicknesses. The latrines cost \$256 each and will also include a small bathing facility to help improve children's health. All of the costs of the project are for materials: concrete blocks, cement, pipes and toilets. The local residents are contributing all of the labor, roofing, doors and sand to the project. EBPP oversees design and construction.
